# GD > Post Content

🕒 1 min read

Last Updated: 🕒 4 months ago

All Widgets come as Widgets, Shortcodes or Blocks. [Learn more about our Super Duper Widgets.](#)

The ***Post Content*** widget is used to output content from any ***textarea*** field including the main Description field with the key ‘post\_content’. The **main use** of this plugin **is to partially output or limit the content output in some way**, this is best seen in the GD Archive Item template where it is used to make the content heights match and give all items the same height.

The GD > Post Meta can be used to fully output the full value of any textarea type field. GD > Post Content is specifically for the GD Archive item template, for showing a max word count of a textarea type field.

## Widget Options

Some settings for this widget are advanced settings, reveal them by clicking the button next to save.

- **Title** – The widget title.
- **Post ID** – Enter a specific post ID or leave blank to use the current post ID.
- **Key** – Select the custom field key. This includes post\_content and any other textarea fields.
- **Show** – What to show in the output, options are;
  - icon + label + value
  - icon + value
  - label + value
  - label
  - value
- **Word limit** – How many words to limit the text to. (will auto strip tags if set)
- **Max height** – Height in (px) This can be used to set a consistent height of the text with the read more button then linking to the full text.
- **Read more link** – The text to use for the read more link at the end of the text. enter ‘0’ to not show link.
- **Text Align** – How the text should be aligned.
- **Strip tags** – This will strip HTML tags from the content.
