Settings Overview for Locations > Countries

🕒 1 min read

Last Updated: 🕒 4 months ago

This is the settings overview for **Locations > Countries** page.

You need to have the [Location Manager](#) extension installed and activated to access these settings.

Countries

This page lists **all the countries that have been added to your directory**, much like WordPress lists all posts and pages that you may have created. The table provides **information about each country**, as below:

- **Country** – Shows the country name.
- **Slug** – Shows the permalink slug of the country.
- **Country after translation** – Shows the name of the country after importing the translations.
- **Slug after translation** – Shows the slug of the country after importing the translations.
- **Image** – Shows the country image, if any.
- **Regions** – Shows the number of regions added to that country.
- **Cities** – Shows the number of cities added to that country.
- **Listings** – Shows the number of listings added to that country.
- **Edit Button** – You can use the **Edit** icon on the far right to edit meta data and other info about the countries.

Bulk Actions

You can translate the countries via .po file and then upload the .mo file to your server. See [How to Translate GeoDirectory](#).

Once you have uploaded the .mo files, tick the countries you translated. Select the “**Translate**” option from the **Bulk Actions** dropdown, and click the **Apply** button. This will translate country slug in URL.
