Embeddable Ratings Badge Setup Guide

🕒 1 min read

Last Updated: 🕒 4 months ago

This setup guide will run through a typical setup of the [Embeddable Ratings Badge](#) extension from start to finish.

Overview

The **Embeddable Ratings Badge** extension allows listing owners to create a widget to display their live ratings from your directory on their website. This is fairly identical to the TripAdvisor rating widget, albeit a lot cooler.

The embed widget is **highly customizable**. You can control **every feature of the badge** and make it available to the user to customize or restrict it. For example, you can remove the **color change options** so that all embeds match your branding colors. Here is how the Customizer looks by default:

Rating (embed your ratings score on your si

Embed your ratings on your site.

Size:

Narrow: 160px width, variable height

Border width:

2

Border radius:

☐ Show shadow

Background:

Buddakan

★★★★★

0 Ratings

<https://ppldb.com/sufyan>

To use a embedded widget, add the customized code below into an HTML page on your website.

```
<div id='GD_widget_embed_132'>Loading...</div><script async src='https://ppldb.com/sufyan/?gd-embed=rating&id=132&size=narrow&border=2&radius=6;background=%23ffffff'></script>
```

Copy Code

For a **full list of features** see the [Embeddable Ratings Badge product page](#).

Installation

The **first step** if you haven’t already, is to **install the Embeddable Ratings Badge extension**. This can be done by following our guides on [how to install an extension](#).

Step 1 – Settings

Once installed and activated, you can find the Embeddable Ratings Badge settings at **GeoDirectory > Settings > Embed**.

Embeddable Ratings Badge extension comes with **sane defaults** meaning the **default settings will work for the majority of users**, however, there are many customizations that can be done via the settings, for a full explanation of what all the settings do please see our [settings overview](#).

Step 2 – Adding the Widget

Next, you will need to add the **Click to Embed** badge on the frontend. You can use our **GD > Embed** widget to add a claim submission button to any widget area, or within content areas as a shortcode or block. To do so, please see the guide about [GD Embed widget](#).

All Widgets come as Widgets, Shortcodes or Blocks. [Learn more about our Super Duper Widgets.](#)

It is recommended to display this widget, block or shortcode only on **Single Listing** page. You can specify display options in widget settings.
