Widget Show / Hide Options

🕒 1 min read

Last Updated: 🕒 4 months ago

Most GeoDirectory Widgets contain the **Show / Hide Options** pictured below.

GeoDirectory uses WordPress **pages as templates** for most main content. This lets users edit templates with no coding knowledge and it also means most **GD templates will use the same widget sidebar as normal WP pages** out the box. [@TODO see how to add a new page template just for GD templates]

Given that several GD widgets may be used on several different page types, the Show / Hide Options let the widget output be **limited to specific pages only**. Therefore, you can add a map widget to the sidebar but have it show on the GD single pages only.
