GD > Location Meta

⌚ 1 min read Last Updated: ⌚ 4 months ago

All Widgets come as Widgets, Shortcodes or Blocks. Learn more about our [Super Duper Widgets](#).

The **Location Meta widget** can be used to display information for the given location. You can use the **Meta Key** option in widget settings to choose which meta field is to be shown.

In order to display meta fields using the **Location Meta widget**, you need to first add meta information to your locations. You can do so from the [Settings > Locations > Add Location](#) section. Alternatively, you can also add meta info when [adding a new location](#).

Widget Options

- **Title** – The title for the widget.
- **Location Type** – Select the type of location, such as City, Country, Region or Neighborhood.
- **Key** – Select the location meta field key to be displayed –
 - **Location Name** – The name of the location.
 - **Location Slug** – The slug (permalink slug) of the location.
 - **Location URL** – The URL of the location.
 - **Location Link** – Link to the location.
 - **Location + CPT URL** – URL of both the location as well as the CPT.
 - **Location + CPT Link** – Link to both the location as well as the CPT.
 - **Location Description** – Descriptive text about the location.
 - **Location Meta Title** – Meta title of the location.
 - **Location Meta Description** – Meta description of the location.
 - **Location Image** – Default featured image of the location.
 - **Location Image Tagline** – Tagline of the Location Image.
- **No Wrap (Checkbox) (A)** – If checked, it removes the wrapping `<div>` tag.
- **Alignment (A)** – Alignment of the item on the page.
- **Text Align (A)** – Alignment of text within the widget.
- **Hide Item on View (A)** – Select on what view the item will be hidden.
- **Hide Secondary Info on View (A)** – Select on what view the secondary info will be hidden.
- **Extra Class (A)** – Adds an extra class to the wrapper for custom styling.
- **Show/Hide Options (Widget only)** – Select where the widget should be displayed.

Example Output

Default output, with city meta description:

Location Meta

Philadelphia is a city in USA. (This is meta desc).
