On this page

[Widget Options](#)[Example Output](#)All Widgets come as Widgets, Shortcodes or Blocks. Learn more about our [Super Duper Widgets](#).

In most cases, this widget will only ever be used on the Add Listing page template. You should link to the add listing page rather than adding this widget anywhere else.

The Add Listing widget is used to display the directory add listing form. The add listing form contains many advanced features such as AJAX auto-saving. Customers can start adding a listing and return at a later date with all the entered information still available.

## Widget Options

All settings for this widget are advanced settings, reveal them by clicking the button next to save.

- **Default Post Type** – (default: auto) This can be used to change the default CPT displayed on first load.
- **Show the login links if required** – Selecting this option will show login and register links to the user if not logged in and guest posting is not enabled.
- **Login Message** – This is the login message shown if login is required to post.
- **Replace container** – When a listing is saved the form will be removed and show a saved message. Here you can set a different container to replace in case you also want to remove the page content on save.

## Example Output

Below is a **partial example** of the output.

\* Indicates mandatory fields

**Enter Listing Details**

**Place Title \***

Enter the title.

**Place Description \***

Enter a description

**Tags**  Enter tags separated by a comma ,  
Tags are short keywords, with no space within.(eg: tag1, tag2, tag3).

**Category \***  Select Category  
SELECT listing category FROM here. SELECT at least one CATEGORY

**Address \***

Please enter the listing street address. e.g.: 230 Vine Street

**Zip/Post Code**

Please enter listing Zip/Post Code

**Set Address On Map**

  
Click on "Set Address On Map" and then you can also drag pinpoint to locate the correct address
