The **GD > Post Meta** widget can output any information about a listing in a nice formatted way.

All raw post meta values can be accessed via the standard WP function `get_post_meta()` by simply prefixing the field key with "geodir\_". E.g. to get the email use: `geodir_get_post_meta($post_id, "email", true);`

## Widget Options

ⓘ Some settings for this widget are advanced settings, reveal them by clicking the button next to save.

- **Title** – The widget title.
- **Post ID** – Enter a specific post ID or leave blank to use the current post ID.
- **Key** – Select the custom field key to use. Standard field values are also available here such as `post_date`.
- **Show** – What to show in the output, options are;
  - icon + label + value
  - icon + value
  - label + value
  - label
  - value
  - value (strip HTML tags)
- **No Wrap** (value strip tags specific) Remove wrapping div.
- **Alignment** – How the item should be positioned on the page.
- **Text Align** – How the text should be aligned.
- **Hide item on view** – This option can hide the whole output when viewed in a post loop grid view or under.
- **Hide secondary info on view** – You can set at what view the secondary info such as label will become hidden when this is used in the post loop archive item template.
- **Output Location** – Some output locations output content differently, here you can set one if required.
- **Extra class** – Give the wrapper an extra class so you can style things as you want.
