# GD > Locations

⌚ 1 min read Last Updated: ⌚ 4 months ago

All Widgets come as Widgets, Shortcodes or Blocks. Learn more about our [Super Duper Widgets](#).

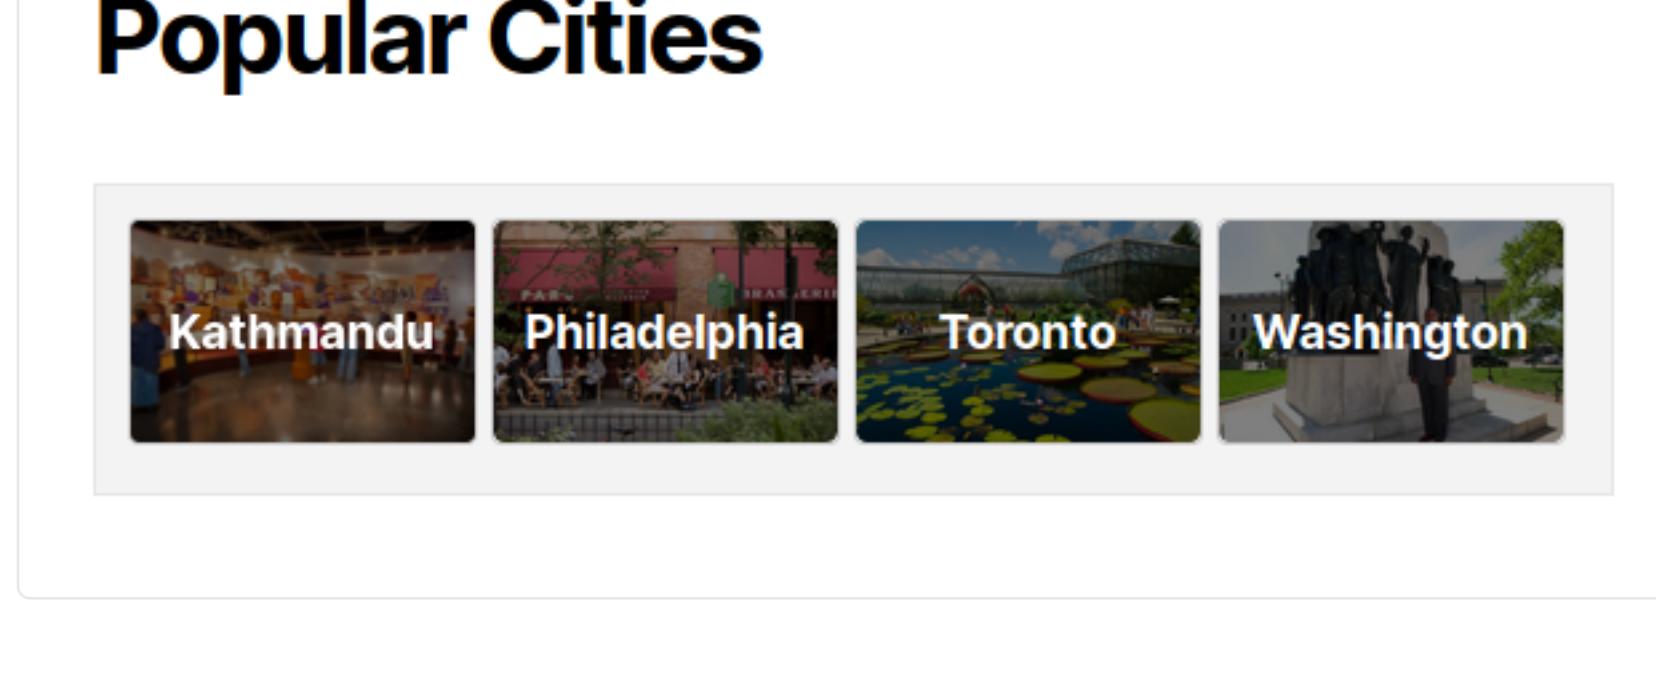

The **Locations widget** displays locations currently in your database such as **Countries, Regions, Cities or Neighborhoods**. The widget can show a location type such as “cities” **relevant to the current Country or Region** being viewed or this **can be manually filtered** in the settings to show specific locations.

## Widget Options

- **Title** – The title for the widget.
- **Show Locations** – Select which locations to be shown in the list (default is Cities).
- **Output Type (A)** – Select whether to display the locations as a list or an image grid.
- **Number of Locations** – Select the number of locations to be shown.
- **Show Pagination on Top (Checkbox) (A)** – If checked, pagination options will appear at the top.
- **Show Pagination at Bottom (Checkbox) (A)** – If checked, pagination options will appear at the bottom.
- **Show Advanced Pagination Details (A)** – This option will display advanced pagination info after the pagination (such as “Showing Page X of Y”).
- **Disable Location Filter? (Checkbox)** – If checked, the Location Filter will be disabled.
- **Show Current Location Only (Checkbox)** – If checked, only the current location will be displayed.
- **Country Slug (A)** – Filters the locations by country slug when Location Filter is enabled.
- **Region Slug (A)** – Filters the locations by region slug when Location Filter is enabled.
- **Show/Hide Options (Widget only)** – Choose where the widget should be displayed.

## Example Output

Sample output, with cities being shown as **image grid**:
