WP All Import Setup Guide

⌚ 1 min read Last Updated: ⌚ 4 months ago

This setup guide will run through a typical setup of the GD-WP All Import extension from start to finish.

Overview

You can use the GD-WP All Import extension to import your listings from anywhere, be it a legacy CMS or another WordPress site.

This extension requires the [WP All Import free WordPress plugin](#) to be installed activated on your site.

You have the option to import listings from any XML or CSV file. As such, WP All Import works flawlessly with most legacy CMSs.

For a full list of features see the [GD-WP All Import product page](#).

Installation

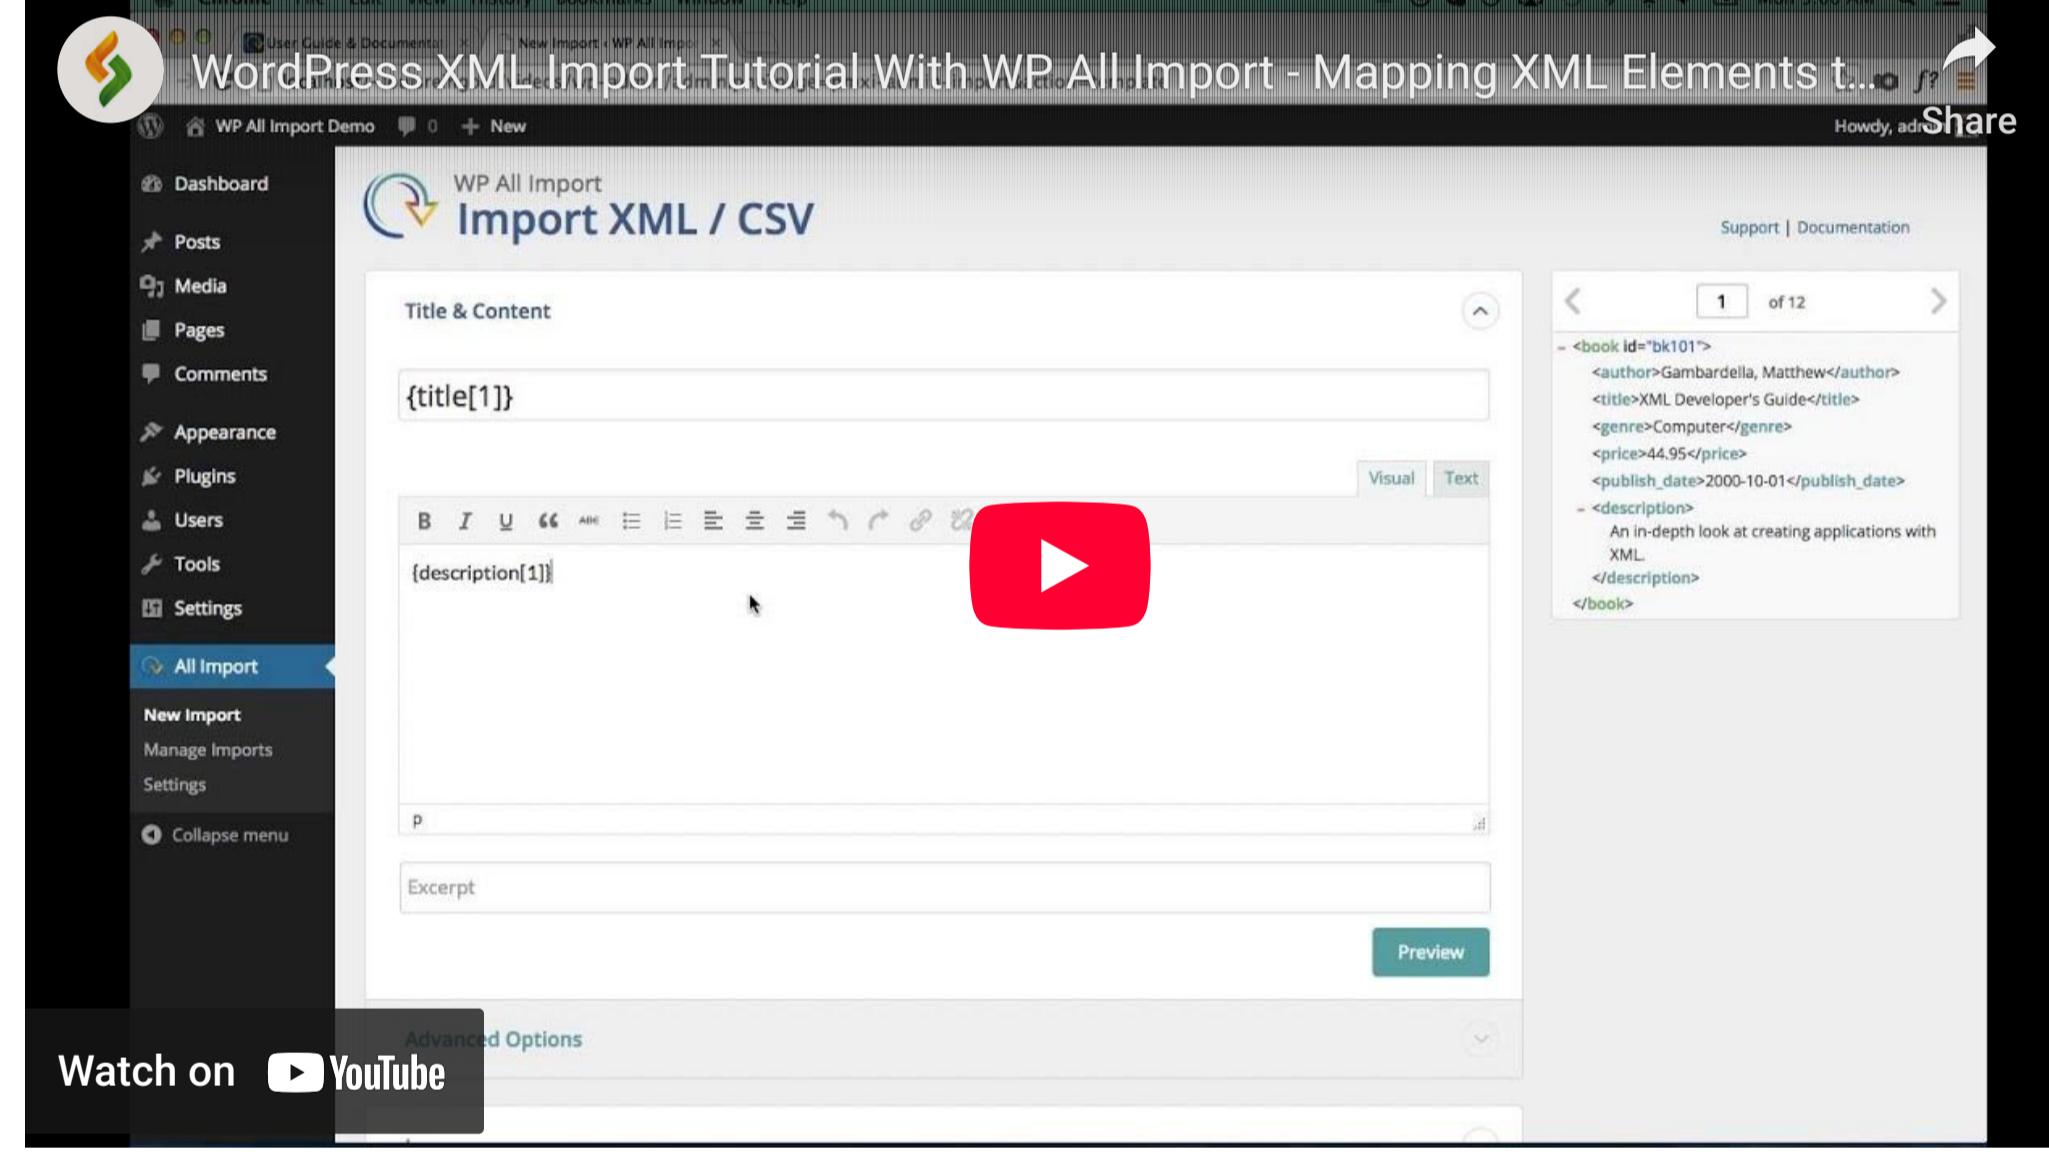

The **first step** if you haven't already, is to **install the GD-WP All Import extension**.

This can be done by following our guides on [how to install an extension](#). Also, be sure to install the [WP All Import free WordPress plugin](#).

WP All import extension comes with **sane defaults** meaning the **default settings will work for the majority of users**.

Running the Import

Once installed and activated, you can run the importer by navigating to **All Import > New Import**. Here is a video overview:

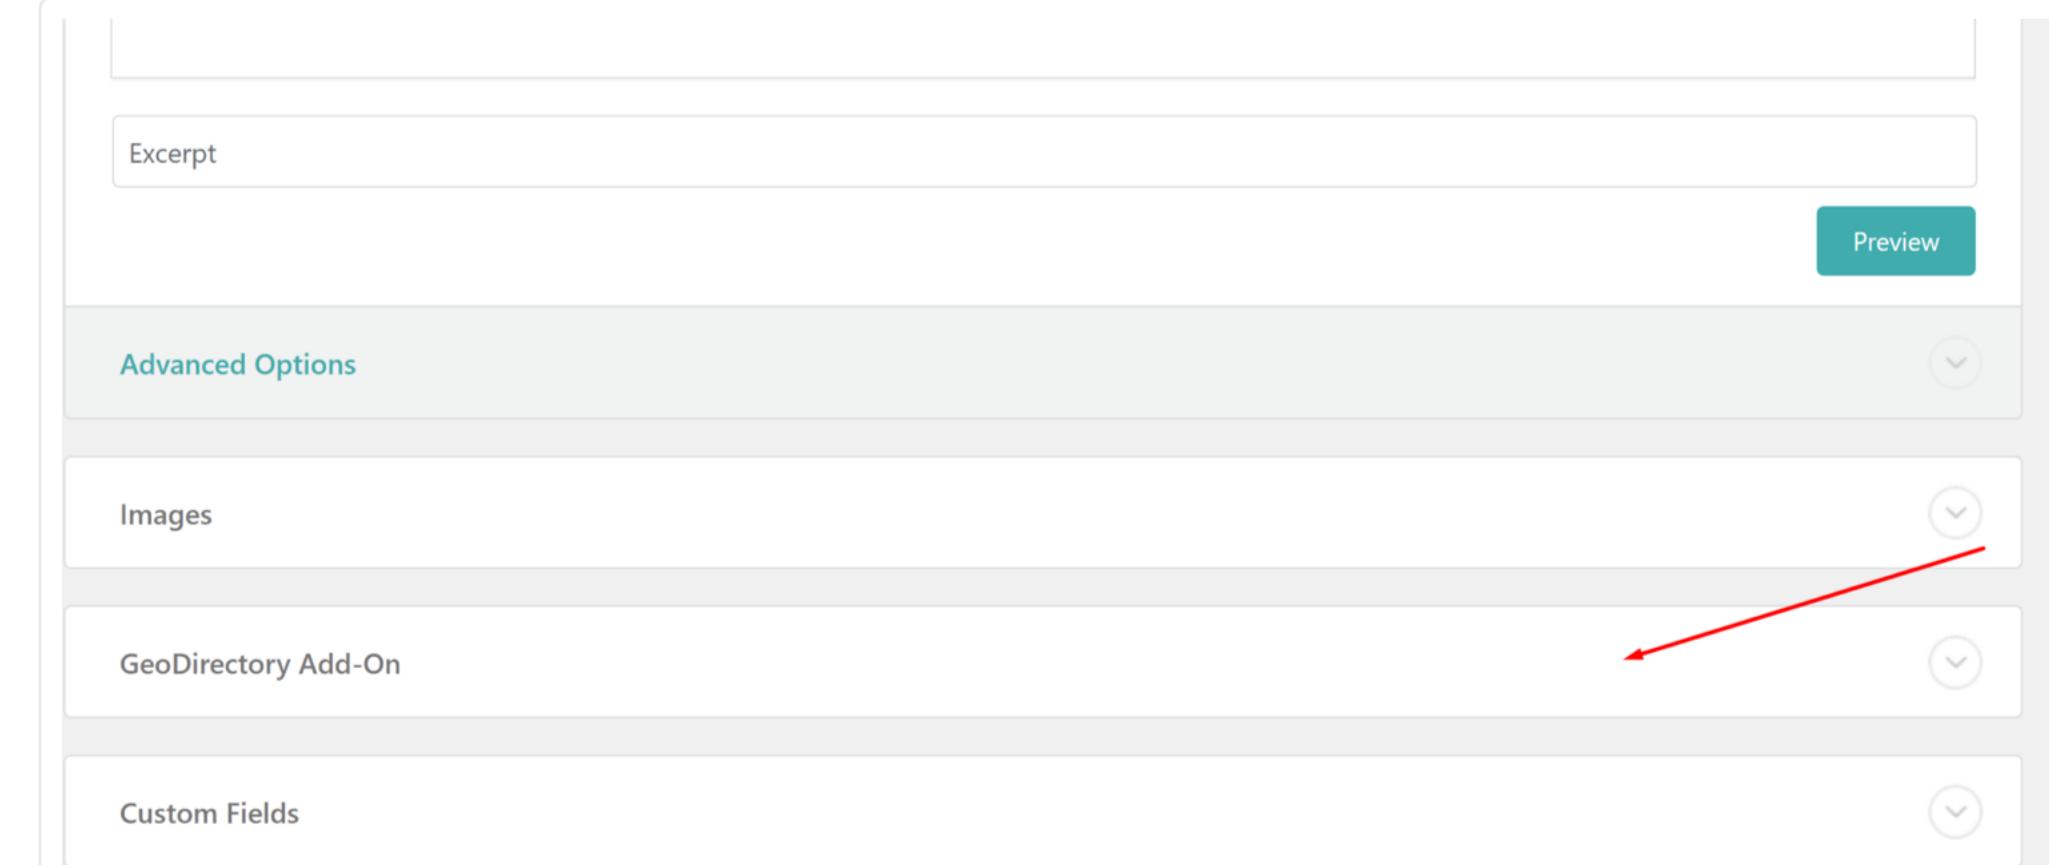

For a step by step guide, refer to the [WP All Import documentation](#).

Usage

Look for this section in Step 3 when making a new import.

'GeoDirectory Addon' section – click to expand it to find the GD fields so you can map your data into them.
