GD Docs

Integrating Ninja Forms with Claim Listings

🕐 1 min read   Last Updated: 🕐
2 months ago
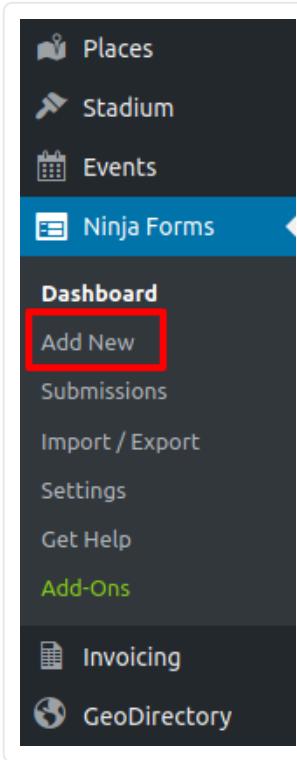

GeoDirectory offers seamless integration with the Ninja Forms WordPress plugin. You can choose to add a **GeoDirectory Contact Form** or a **Claim Listings Form** using Ninja Forms.

This article will walk you through the process of adding a **Claim Listings** form using Ninja Forms.

> ⚠️ Before going any further, make sure you have installed and activated both Claim Listings extension as well as Ninja Forms WordPress plugin.

Creating the Claim Listings Form

1   First, you will need to create the Claim Listings form if you haven't already done so. Navigate to **Ninja Forms > Add New.**

2   Select **GeoDirectory Claim Form** from the list of form templates.

> The **GeoDirectory Claim Form** template comes loaded with all the hidden fields necessary to integrate Ninja Forms with Claim Listings extension.
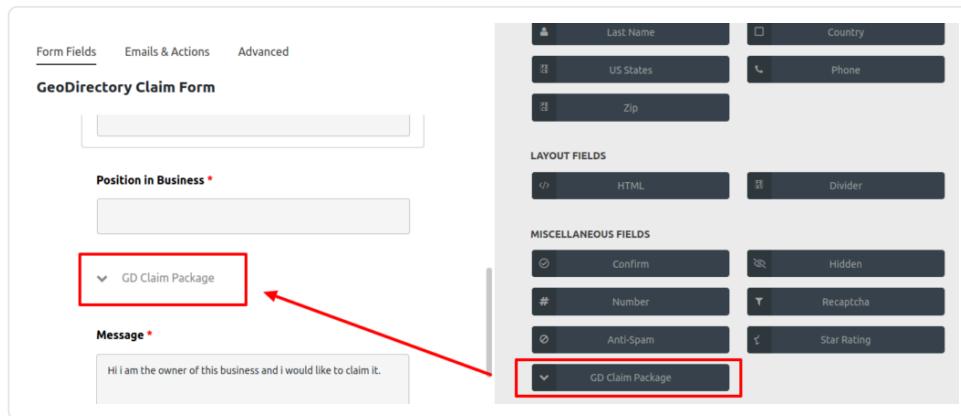

3   Customize the form as per your
requirements, and then publish it.

> ℹ️ To learn more about the Form Builder itself, please
> refer to Ninja Forms documentation.

4   If you have the **Pricing Manager** extension
installed and enabled, you may also add an
additional field to your form **GD Claim Package.**
This lets users select the package for claim
listings and is helpful if you wish to implement
the "Pay to Claim" feature.

Using Ninja Forms with GeoDirectory

GeoDirectory-specific forms created using Ninja Forms plugin can be implemented on the frontend using the **GD > Ninja Forms** widget.

Once you have added the widget, select the Claim Listings form that you just created.

Make sure the **"Post Contact Form"** checkbox is unchecked. This option is used to contact the listing email field and not to submit claims.

> ⓘ You can learn more about **GD > Ninja Forms** widget on this page.
